Comprehensive Searching in PsycINFO – Multiple Databases

1. Use PsycINFO database to build multiple databases into a literature search.

2. To access PsycINFO, visit the Alverno Library homepage, select Databases by Subject, and click Psychology.

3. Click the “Choose Databases” link in PsycINFO, this allows you to add multiple EBSCOhost databases to a search.

   **To search multiple databases, click the “Choose Databases “link.**

4. A window will appear listing the EBSCOhost databases available to Alverno patrons. Select which databases you wish to include in a search. By default, PsycINFO will already be selected. Depending on your research topic, good databases to add to a comprehensive psychology search might be ERIC and Education Research Complete or MEDLINE.

   Choose which databases to include in a search. Caution, choosing too many databases may give you a very high number of results.

5. After you’ve selected your databases, click “OK” and the PsycINFO search box will appear. Enter your search terms and click “Search” to view your results.
